

TAMWORTH TUNING

Road Hub Dyno Testing & Waiver Form

Service Overview

Tamworth Tuning is a dealer in the Insoric Hub Dyno and also Magic Motorsport Road Dyno. We are able to dyno test all of our bookings providing you as the customer a real time BHP, WHP, and PS reading both before and after your tuning session. This allows us to step aside from all mobile companies who offer a software only service. Having the ability to test a vehicle before and after testing allows you as the owner the ability to know exactly what you have purchased.

Tamworth Tuning can cater for all types of cars both 2wd and 4wd without removing shafts, fuses, etc.

Dyno Testing Pricing

- **Dyno run session:** £80
- **Dyno run with a Stage 1 map:** £220

Please note this testing service can also be booked alongside any of our other services including Economy tuning, AdBlue remaps, DPF remaps, NOx sensor remaps, and EGR deletes. Testing is subject to weather conditions, vehicle quality, and the vehicles stock power. Tamworth Tuning has the right to cancel and refund a session without notice at any time.

Terms and Conditions for Vehicle Power Testing

Clients are advised that power testing a vehicle is placing the vehicle in a condition that it normally will not be driven in. The test procedure includes a 3rd and 4th gear power pull to the end of the RPM limiter. Turbo, clutch, fuel injectors, and many other components are likely to fail if there is an underlying issue or if the vehicle is not fit for purpose. Although Tamworth Tuning performs diagnostics like all companies, it is not our responsibility to ensure components are of good quality. Many factors can change the quality of a component at any time before or during a test.

Vehicle owners should note that testing a vehicles power is not subject to a guarantee of power. Although Tamworth Tuning can install a setup to achieve power, underlying issues may prevent a vehicle from achieving the goal figure. It is understood that Tamworth Tuning is to install software, provide diagnostics, and test the vehicle for power achieved in a single booking. Further charges of £60 per hour will apply for any client wishing for Tamworth Tuning to further diagnose a vehicle. This separate service may require a separate booking and can be rejected at the time of vehicle testing. The nature behind this prevents vehicle owners from gaining work at no charge where it is found a vehicle is not performing to its best ability. Tamworth Tuning performs the same diagnostics in all bookings prior to software installation. Tamworth Tuning accepts no responsibility for issues to vehicle components.

Customer Acknowledgment & Consent
